DOMESTIA

Working to make your life simple

DOMESTIA *is now compatible with Google Home !*

User Guide

Google

works with the
Google Assistant

1. What is Google Home ?

Google Home is a family of connected speakers associated with a smart personal assistant made by the American company Google. They are equipped with a speaker and 1 to 6 microphones depending on the model, which allow the devices to react to the voice commands of users.
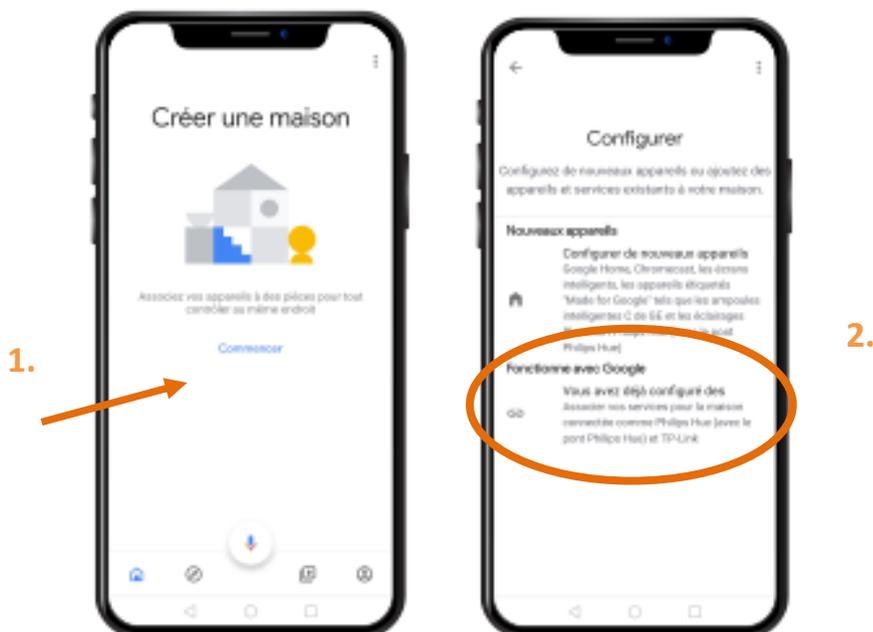

2. How Domestia works with Google Home ?

You can now use the Google Home app to do the following:
Control, organize and manage your home automation system, from a single interface (the Google Home app works as a remote compatible with connected devices of major brands).

3. How to use Google Home to control your Domestia installation ?

You must first have a Master Control Module (DME-LAN-002) in your Domestia installation. If this is not the case, contact your authorized dealer or installer.
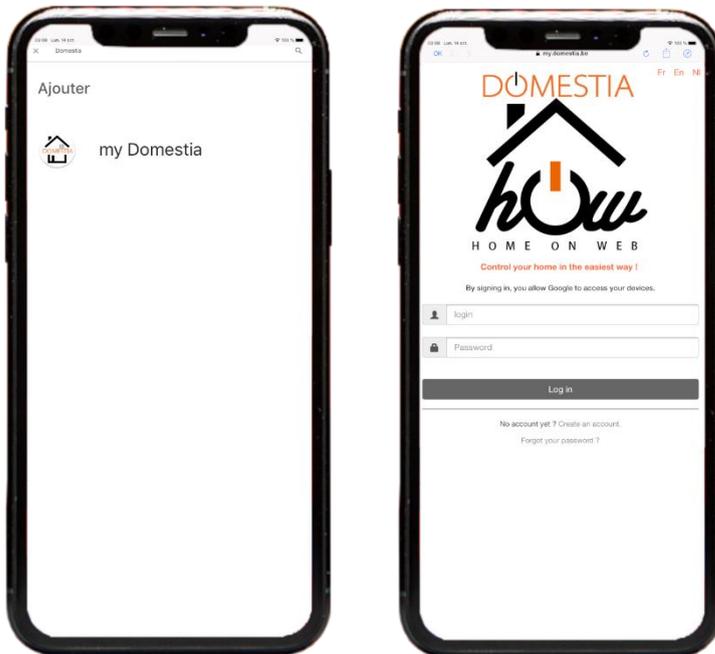

Super easy to install :

1. Set up your Google Home with the Google Home app.

2. In the app, link your Google and Domestia accounts.

- **In the app, link your Google and Domestia accounts** : click on "works with Google"

- **Link Google and My Domestia accounts by clicking on "Add a service"**

  1. **In "Add a service", click on "my Domestia" service**
  2. **Enter your login and password**
  3. **Your account is now linked!**

4. What if, after setup, my installation does not respond to Google home orders ?

It is possible, after adding "Domestia" to your "Google Home" that your lamps (or your installation) do not react when using Google Home while it validates the desired order.

➔ Your DME-LAN-002 is probably out of date and does not recognize the command through Google Home.
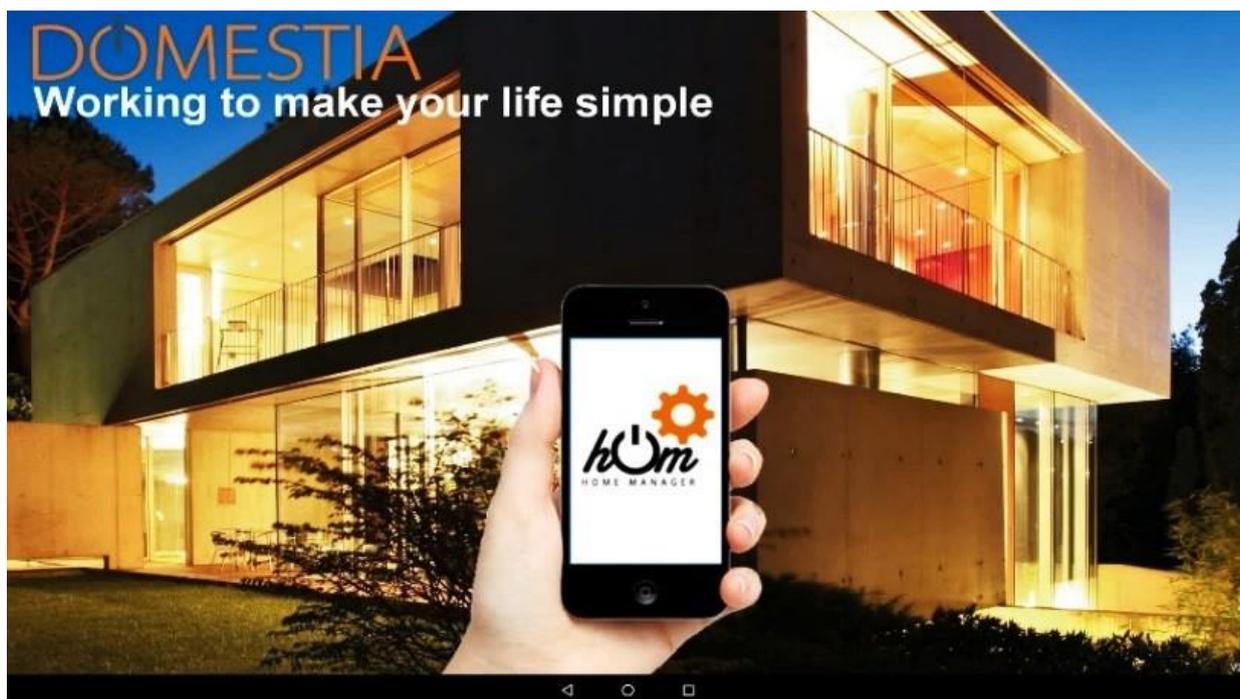

5. How to update your Master Control Module (DME-LAN-002) ?

In order to take advantage of Google Home services, you must have the latest firmware version of the Master Control Moudle (DME-LAN-002). If this is not the case, simply update it using the Home Manager application.

Here's how to update your DME-LAN-002 via Home Manager :

- **Download Home Manager on Apple, iOS, Android or via our website www.domestia.be on the downloads page.**

•**Click on the "Home Manager" icon → you arrive on the home screen.**

•   **Click on "connection": reading the configuration**
